

For the Face Mount Option, the Versa Shield panel is normally sized 2" larger than the protected opening in both height and width.

For the Inset Mount Option, the Versa Shield panel should be sized 1/4" to 3/8" smaller than the protected opening in both height and width. Please be sure to check the dimensions inside the opening in several places, and calculate your final sizes by the smallest of the opening dimensions. Remember that scribe angles will be furnished with this application.
